

EMPLOYMENT OPPORTUNITIES IN QBE EUROPEAN OPERATIONS

Job title: Data Management Analyst

Department: IT

Location: Leadenhall Street, London

Role Purpose (Summary)

The Data Management Analyst will work with end users to identify their data requirements for the data warehouse, lead the acceptance and user testing phases of projects and provide ongoing post implementation support.

Systems and Data analysis will be required to improve the value and accuracy of the data within the data warehouse.

General Description

- Working closely with the EI Business Analytics team, facilitate the identification and documentation of QBE business unit's EI data requirements.
- Build and maintain strong relationships across QBE divisions to ensure the quality and content of the data within the warehouse meets business requirements.
- Prioritise workloads to balance conflicting priorities in order to ensure that all given deadlines are achieved to a high standard.
- Undertake problem investigation, analysis and resolution to maintain and improve data being used by customers.
- Engage with third party suppliers, as appropriate, in the delivery of quality data to support business data requirements.
- Perform source system analysis, source to target mappings and source to data warehouse reconciliations to meet the Data Management requirements of the team.

Essential Requirements

- Experience with data warehousing and reporting tools and a working knowledge of SQL Server.
- Understanding of key insurance metrics and underlying financial information elements.
- Experience liaising with business stakeholders to identify and document business requirements.
- Experience producing technical specifications detailing solutions for approval by users and for technical use by developers and testers.

- Good awareness of the system development lifecycle and disciplines in tandem with a broad awareness of industry standard analysis techniques and approaches.
